Abstract #33

THE TEST OF EFFECTIVENESS BETWEEN THE APPLICATION OF TAPIOCA FLOUR (*Manihot utilisima*) AND COFFEE POWDER (*Cofea*) IN WOUND HEALING PROCESS FOR THE WHITE MOUSE (*Rattus Norvengicus Strin Wistar*).

Nopa Fajarwati, Suriadi, Surtikanti, Ramadhaniyati, Suryadi
Institute of Nursing Muhammadiyah, Pontianak

Background: In last few years, using of tapioca flour and coffee for wound therapy has been used by people, while there hasn't been any research that clarifies about benefit of both variables in wound healing process. Purpose: Purpose of this research was to examined the effectiveness of tapioca flour's and coffee's powder using in wound healing process. Methods: This research was done in STIK Muhammadiyah which starte from February 26th 2013 to March 10th 2013 for (1-8) wound and in February 27th 2013 to March 11th 2013 for (9-20) wound. It used Quasy Experiment Reseach with Post Only Design which was done to ten male white mice. Each has two wounds and each wound was was given by a different action, that was giving tapioca flour to ten wounds and coffee powder to other ten wounds. Results: From this research giving tapioca flour was more effective than giving arithmetic's coffee powder in wound healing process, with T Value is 3,464 and T Table's is 1,734 and the average of wound healing tapioca flour is 11,20 and coffee powder 12,80. Conclusion: Giving tapioca flour was faster than giving coffee powder . It was caused by tapioca flour has cantent which has a big role in matiriks of new blood, cells begin to be formed and kolagen establishment which produced by fibrolast, and also help in increasing granulasi and kolagen it can help inflamasi and immune establishment.

Key words : Tapioca flour, Coffee, Wound healing.

SURIADI MURIANA, S.Kep.Ns.,M.Pd.,M.Kep
